

Earthquake Safety Tips

Community Disaster Management System

Preparedness checklist for quick community response and household safety.

Before an Earthquake

- Identify safe spots indoors under sturdy furniture and away from windows, mirrors, and heavy shelves.
- Secure cupboards, gas cylinders, water tanks, and tall furniture that may fall during shaking.
- Practice Drop, Cover, and Hold On with all family members, including children and elderly persons.

During an Earthquake

- Drop to the ground, take cover under a strong table or desk, and hold on until shaking stops.
- If outdoors, move to an open area away from buildings, poles, walls, and power lines.
- Do not use lifts. If driving, stop in a safe open area and stay inside the vehicle.

After an Earthquake

- Expect aftershocks and move carefully while checking for injuries and structural cracks.
- Turn off gas, electricity, and water if you suspect leakage or damage.
- Use the portal to report collapsed structures, blocked roads, missing persons, or urgent medical needs.
